

Immigration paperwork

Immigration Status Guardian

One engine that reads the government so you don't have to. It compares the dates on your documents, watches the Visa Bulletin, and interrupts you exactly once.

The approval notice in your drawer says twenty months.

The record that governs your stay says fifty-five days.

CBP stamps an admit-until date on your I-94 when you land. USCIS prints a different date on your I-797. If your passport expires first, CBP cuts the I-94 to the passport, and nothing tells you.

"The 'Admit Until Date' is the date that the traveler's immigration status expires in the U.S." · CBP, I-94 Expiration Dates fact sheet, Pub. 0326-0715

FORM I-797 · VALID UNTIL

2026-12-28

Valid To: 12/28/2026

55 DAYS

FORM I-94 · ADMIT UNTIL

2026-11-03

Admit Until Date: 11/03/2026 · equals the passport expiry

1.2M+

Indian nationals in the EB-1, EB-2, and EB-3 backlog. Long waits, many documents, many clocks.

NFAP analysis of USCIS data as of Nov 2, 2023, via Boundless (Mar 2025)

12×

Every month USCIS designates which of two Visa Bulletin charts applies. A filing window can open on one bulletin and close on the next.

USCIS, Adjustment of Status Filing Charts from the Visa Bulletin

1

Date that actually governs the stay: the I-94's admit-until, which a passport that expires first silently shortens.

CBP fact sheet; University of Kansas HR, Understanding Your Status Expiration

For H-1B and H-4 holders, international students and workers, families in the employment-based backlog, and the attorneys who field their "is this normal?" emails.

WHAT IT DOES

THREE DOCUMENTS IN · ONE FLAG OUT · THEN QUIET

- NEEDS REVIEW
- MATERIAL
- ACTIONABLE
- WINDOW OPEN
- NOVEL

55 *days between the governing dates*

Your document dates differ by 55 days. Review this with your attorney.

- ☐ REVIEW ATTORNEY DRAFT
- APPROVE FOR ATTORNEY REVIEW →

Approval writes a receipt on this clock, event, and rule version. Nothing is sent unless a verified SES sender is configured.

REAL UPLOAD THROUGH THE SAME ENDPOINT YOUR OWN FILES WOULD USE

EVERY RESULT LABELED LIVE BEDROCK OR RECORDED REPLAY

An event surfaces only if all four hold.

Material, actionable, inside its window, and not already surfaced for this clock, event, and rule version. Everything else updates the ledger silently. A replay, a restart, or a second upload of the same documents never produces a second ping.

agent/engine/decision_gate.py · store.py
UNIQUE(clock_id, event_id, rule_version)

FIRST RUN

☒ MATERIAL ☒ ACTIONABLE ☒ WINDOW OPEN
☒ NOVEL

Surfaced. One draft, one ping.

SAME DOCUMENTS AGAIN

☒ MATERIAL ☒ ACTIONABLE ☒ WINDOW OPEN
☐ NOVEL

Silent. Already flagged, the same draft is still available.

SEPTEMBER BULLETIN

☐ STAYED QUIET

Priority date not yet current for the seeded case.

OCTOBER BULLETIN

☒ SURFACED

USCIS switches to the Dates for Filing chart; the date is current. One filing-window draft. Run it again: silent.

EDGE 1 · READ

Extraction with evidence

Amazon Bedrock Converse reads each document. Every field returns with the exact text it was read from and a status: extracted, missing, or ambiguous. Anything unsure blocks the rule; no arithmetic runs on a guess.

agent/llm/extract.py

EDGE 2 · DRAFT

An intro around a fixed core

A Strands Agent writes only the opening of the attorney message. The dates and the flag are fixed text it cannot edit; if the model is absent or fails, the core ships alone.

agent/llm/draft.py

EDGE 3 · ASK

A guardian with five tools

A Strands Agent whose only tools are the engine's checks, on the same ledger the UI uses. It may call a tool and report the result. It never computes dates or decides status itself.

agent/llm/guardian.py

Between the edges: a deterministic engine. Schema, rules, decision gate, ledger. Plain Python, 204 offline tests, five live ones.

AGENT/ENGINE/ · AGENT/PACKS/

When something needs a second look,
Ask the guardian.

0 Request: My I-94 says 2026-11-03 and my I-797 says 2026-12-28. Do they disagree?

1 `check_document_dates(admit_until=2026-11-03, i797_valid_until=2026-12-28)` OK MODE: LIVE GATE: SURFACED DRAFT PERSISTED
The I-94 and I-797 dates disagree by 55 days · passed materiality, actionability, window, novelty

CHECK_DOCUMENT_DATES RUN_SAMPLE_CASE_CHECK CHECK_UPLOADED_CASE CHECK_VISA_BULLETIN CHECK_RECALL

One agent per session; follow-ups build on the last result, and each trace covers only the new turn.

HONEST BY CONSTRUCTION

PIECE	STATUS	DETAIL
Document upload	REAL	Your bytes go through the endpoint; every file is decoded and validated before any model call.
Extraction	LIVE RECORDED	Live Bedrock with model access; otherwise a byte-verified recording, and the page says which.
Visa Bulletin	CAPTURED	September and October 2025 with the USCIS chart designation. travel.state.gov blocks automated fetching.
CPSC recall feed	LIVE	Public API with a captured fallback. Backend and tests; the engine is generic.
AgentCore Runtime	DEPLOYED	Invoked in the cloud: surfaced once, silent on repeat. Prompt path awaits a redeploy.
Unattended run	SCRIPTED	EventBridge → Lambda → Runtime → one SNS ping. Provisioning script in the repo.

FAILURE IS VISIBLE, NEVER SILENT

WHAT IS REAL, WHAT IS RECORDED

WHAT IT NEVER SAYS

"*You are in status.*"

"*You are safe to travel.*"

"*File this.*"

Every output is a flag for the attorney. Status math, grace periods, and unlawful-presence bars are deferred on purpose: a confident wrong answer here does real damage.

MODE AND MODE_REASON ON EVERY RESPONSE

Immigration Status Guardian · architecture

One deterministic engine, two domain packs. The model works at three edges: extracting document fields, writing the intro of an attorney draft it cannot otherwise edit, and the guardian agent, whose only tools are the engine's checks.

RUNNING IN THE CLOUD

AgentCore Runtime, direct code deploy

The same pipeline through one entrypoint, CloudWatch logs and X-Ray traces on. Invoked twice: the first call surfaces the 55-day gap with a draft, the second is silent and returns the same draft.

Two deploy breaks fixed on the way: dependencies resolved from a root requirements file, and a source path that shipped the engine and fixtures with the entrypoint.

`deploy/agentcore_entrypoint.py` · `deploy/unattended/`

NEXT, IN ORDER

REDEPLOY	Ship the guardian's prompt path to the Runtime.
SCHEDULE	Provision the unattended bulletin check: EventBridge → Lambda → Runtime → SNS.
SCENARIOS	Record "dates agree" and "passport unreadable" so all three run offline.
PLATFORM	AgentCore Memory, Identity, Policy, and Gateway-brokered feeds.

Everyone has clocks the government moves.

**This one watches
them, and
only speaks
when there's a
decision to make.**
